

Biometric Identification

Identification, Tracking and Transaction Security
using Fingerprint Technology

Organizational security depends on a combination of policies, procedures and controlled access to information as well as facilities. Access Control schemes usually depend upon card-based identification and/or passwords. Biometric Identification, especially fingerprint-based authentication, is emerging as the most practical solution to the opposing, real-world requirements of security and efficiency.

Biometric Offerings from GetData

- Fingerprint Control Plug-in Module
- SDK Development
- Custom Development of DLL's or Executables
- Biometric Solutions Integration with Existing or Legacy Systems
- On-site or Remote Development Options
- Rapid Application Development System

Working with Fingerprints

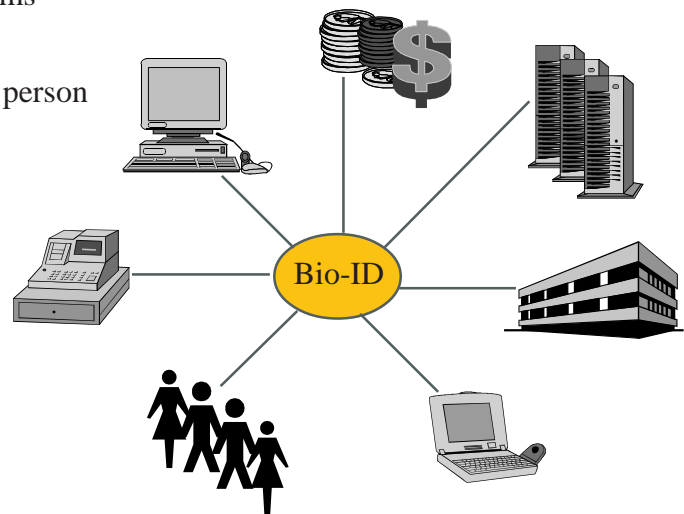

- One-to-one and one- to-many matching algorithms
- Create, store and match Fingerprint Templates
- Create and manipulate Fingerprint Graphics
- Capture and store multiple fingerprints for each person
- User defined matching criteria thresholds
- Secure template structure creation and storage

Business Solutions

- Integrated Security Information
- Secure Identification
- Database Management Systems
- Data Management and Consulting
- Law Enforcement
- Crime and Incident Management

Uses for Fingerprint Authentication

- Personnel/Personal Identification
- Access Control
- Inmate Booking, Transfer and Release Verification
- Business Resource Tracking
- Secure Transactions Assurance
- Keys Management
- Time and Attendance Record-keeping
- General IT security
