

# Emergency and Rapid Deployment ID System

**Emergency and Rapid Deployment ID System** is a complete solution for government and private agencies that have emergency response teams and volunteering events. Using a driver license scanner the software extracts all the relevant text information, Photograph and Signature, and assigns the information into the appropriate database fields. With a click of button a valid ID is issued. **The process takes few seconds, reduces costs, speeds registration and brings accuracy and greater accountability to the process.**

## Applications

**Rapid Registration**- No waiting for an operator to key information in manually

**Secure and Accurate Identification**- Verify and identify volunteers and team members

**Data Verification**- Verify individual's data for regulated activities

**Reports and Data Surveillance**- Create reports and share data with other agencies

- Emergency and Volunteer registration
- Emergency Management Agencies
- Department of Health
- Fire Department
- Police Department
- Security Events
- Any identification applications

## Fully Automated Process

The software reads information stored on U.S., and Canadian driver's License, US Military IDs, and Social Security Cards, using OCR, magnetic stripe or PDF-417 bar code technologies. Instead of manually entering data to register volunteers, validate identities or create visitor IDs, an operator simply scans a driver's license the software decodes and parses information stored on the ID scanned. The decoded data is then automatically enrolled and the user is prompted to save the Photo or signature if available. The operator then prints an ID Card.

## The System

- Mobile Rapid Deployment Case
- ID Software and Printer
- Digital Camera
- Driver License Scanner
- Supplies for ID Cards
- Laptop (Optional)

## Minimum System Requirements

- 233 MHz CPU , CD-ROM Drive, SVGA Monitor, USB Port
- MS Windows 98, MS Windows 2000 (requires Service Pack 2), ME, or XP
